

# CONTENTS

## PART I : GENERAL CONSIDERATIONS

### 1. INTRODUCTION TO PLANT BREEDING 1-13

1.1. Introduction	1	1.7. Activities in Plant Breeding	7
1.2. History of Plant Breeding	2	1.8. Some Important Achievements	8
1.3. History of Plant Breeding in India	4	1.9. Undesirable Consequences	10
1.4. Nature of Plant Breeding	5	1.10. Future Prospects	12
1.5. The Disciplines a Breeder Ought to Know	5	<b>Questions</b>	12
1.6. Objectives of Plant Breeding	5	<b>Suggested Further Readings</b>	13

### 2. DOMESTICATION AND GERmplasm CONSERVATION 14-43

2.1. Introduction	14	2.12. Germplasm Evaluation	37
2.2. Domestication	14	2.13. Germplasm Cataloguing, Data Storage and Retrieval	38
2.3. Patterns of Evolution in Crop Plants	18	2.14. Germplasm Multiplication and Distribution	38
2.4. Germplasm	20	2.15. Germplasm Utilisation	38
2.5. Gene Pool Concept	21	2.16. Indian Plant Genetic Resources Management System	39
2.6. Genetic Erosion	21	2.17. International Cooperation and Agreements	41
2.7. Germplasm Conservation	22	2.18. Future Activities	42
2.8. Collection of Germplasm	25	<b>Questions</b>	43
2.9. Centres of Origin	26		
2.10. Gene Banks	31		
2.11. Germplasm Regeneration	36		

### 3. PLANT INTRODUCTION 44-53

3.1. Introduction	44	3.7. Purpose of Plant Introduction	50
3.2. Types of Plant Introduction	44	3.8. Important Achievements	50
3.3. History of Plant Introduction	45	3.9. Merits of Plant Introduction	51
3.4. Plant Introduction Agencies in India	46	3.10. Demerits of Plant Introduction	51
3.5. Procedure for Plant Introduction	46	<b>Questions</b>	52
3.6. Acclimatisation	49	<b>Suggested Further Readings</b>	52

**4. MODES OF REPRODUCTION IN CROP PLANTS****54-65**

4.1. Introduction	54	4.7. Determination of Amount of Cross-Pollination	63
4.2. Asexual Reproduction	54	4.8. Detection of Apomixis	63
4.3. Sexual Reproduction	56	4.9. Relevance of Mode of Reproduction	63
4.4. Anthesis	59	<b>Questions</b>	65
4.5. Mode of Pollination	59		
4.6. Determination of Mode of Pollination	62		

**5. POLLINATION CONTROL I. SELF-INCOMPATIBILITY AND APOMIXIS****66-83**

5.1. Introduction	66	5.7. Relevance of Self-Incompatibility	77
5.2. Self-Incompatibility	66	5.8. Elimination of Self-Incompatibility	78
5.3. Heteromorphic System	67	5.9. Temporary suppression of Self-Incompatibility	78
5.4. Homomorphic System	67	5.10. Apomixis	80
5.5. Molecular Basis of Self-Incompatibility	74	<b>Questions</b>	83
5.6. Interactions between S Alleles	76		

**6. POLLINATION CONTROL II. MALE STERILITY****84-106**

6.1. Introduction	84	6.7. Limitations of Cytoplasmic-Genetic Male Sterility System	97
6.2. Phenotypic Expression of Male Sterility (MS)	84	6.8. Approaches to Minimise the Undesirable Consequence of Male Sterile Cytoplasm	98
6.3. Genetic Male Sterility (GMS)	85	6.9. Chemically Induced Male Sterility	100
6.4. Cytoplasmic Male Sterility (CMS)	90	6.10. Pistillate Condition	104
6.5. Cytoplasmic-Genetic Male Sterility (CGMS)	91	<b>Questions</b>	105
6.6. Origin of Male Sterile Cytoplasm	97	<b>Suggested Further Readings</b>	106

**7. QUALITATIVE AND QUANTITATIVE CHARACTERS****107-129**

7.1. Introduction	107	7.5. Inheritance of Quantitative Characters	116
7.2. Genotype and Phenotype	107	7.6. Components of Genetic Variance	123
7.3. Qualitative and Quantitative Characters	108	<b>Questions</b>	128
7.4. Inheritance of Qualitative Characters	108	<b>Suggested Further Readings</b>	129

**8. BIOMETRICAL TECHNIQUES IN PLANT BREEDING****130-152**

8.1. Introduction	130	8.5. Varietal Adaptation	145
8.2. Assessment of Variability	130	<b>Questions</b>	151
8.3. Aids to Selection	133	<b>Suggested Further Readings</b>	151
8.4. Choice of Parents and Breeding Procedures	137		

## PART II : PRINCIPLES : SELF-POLLINATED CROPS

### 9. SELECTION IN SELF-POLLINATED CROPS

153-161

9.1. Introduction	153	9.7. Genetic Advance Under Selection	159
9.2. History of Selection	153	9.8. Expected Genetic Advance in Segregating Populations	160
9.3. Progeny Test	154	9.9. Realized Heritability	160
9.4. The Pureline Theory	154	Questions	160
9.5. Effects of Self-pollination on Genotype	156	Suggested Further Readings	161
9.6. Origin of Genetic Variation in Purelines	157		

### 10. HYBRIDIZATION : TECHNIQUES AND CONSEQUENCES

162-174

10.1. Introduction	162	10.7. Raising the $F_1$ Generation	170
10.2. History of Hybridization	163	10.8. Selfing	170
10.3. Objectives of Hybridization	163	10.9. Difficulties in Hybridization	171
10.4. Types of Hybridization	164	10.10. Consequences of Hybridization	171
10.5. Hybridization Programme	165	Questions	173
10.6. Procedure of Hybridization	166	Suggested Further Readings	174

## PART III : PRINCIPLES : CROSS-POLLINATED CROPS

### 11. GENETIC COMPOSITION OF CROSS-POLLINATED POPULATIONS

175-183

11.1. Introduction	175	11.4. Systems of Mating	181
11.2. The Hardy-Weinberg Law	175	Questions	182
11.3. Factors disturbing The Equilibrium in Populations	178	Suggested Further Readings	183

### 12. SELECTION IN CROSS-POLLINATED CROPS

184-191

12.1. Introduction	184	12.7. Rapid Gain-Plateau—Rapid Gain Response	187
12.2. Types of Response to Selection	184	12.8. Free and Potential Variability	188
12.3. Rapid Gain Followed by Slow Response	185	Questions	190
12.4. Slow Progress for a Long Period	185	Suggested Further Readings	191
12.5. Slow Response for a Short Period	186		
12.6. Lack of Response to Selection	187		

### 13. HETEROSIS AND INBREEDING DEPRESSION

192-210

13.1. Introduction	192	13.6. Biometrical Genetic Explanation of Heterosis	202
13.2. Inbreeding Depression	192	13.7. Physiological Bases of Heterosis	204
13.3. Explanation for Differential Response to Inbreeding	194	13.8. Molecular Basis of Heterosis	205
13.4. Heterosis	195	13.9. Commercial Utilization	207
13.5. Genetic Bases of Heterosis and Inbreeding Depression	197	13.10. Fixation of Heterosis	209
		Questions	209
		Suggested Further Readings	210

## PART IV : METHODS : SELF-POLLINATED CROPS

### 14. MASS SELECTION 211-215

14.1. Introduction	211	14.5. Demerits of Mass Selection	214
14.2. Applications of Mass Selection	211	14.6. Achievements	214
14.3. Procedure of Mass Selection	212	Questions	215
14.4. Merits of Mass Selection	214	Suggested Further Readings	215

### 15. PURELINES SELECTION 216-222

15.1. Introduction	216	15.7. Advantages of Pureline Selection	220
15.2. Characteristics of Purelines	216	15.8. Disadvantages of Pureline Selection	220
15.3. Uses of Purelines	217	15.9. Comparison Between Pureline and Mass Selections	220
15.4. History of Pureline Selection	217	15.10. Achievements	220
15.5. Applications of Pureline Selection	217	Questions	222
15.6. A General Scheme for Pureline Selection	218	Suggested Further Readings	222

### 16. PEDIGREE SELECTION 223-242

16.1. Introduction	223	16.9. Development of Agronomically Stable Varieties	235
16.2. Pedigree Record	223	16.10. Participatory Crop Improvement	238
16.3. Applications of Pedigree Method	225	16.11. Off-Season Crops	240
16.4. Procedure for Pedigree Method	225	16.12. Merits of Pedigree Method	240
16.5. Selection of Parents	227	16.13. Demerits of Pedigree Method	240
16.6. Modified Pedigree-Bulk Method	229	16.14. Achievements	240
16.7. Selection during Segregating Generations	231	Questions	241
16.8. Early Generation Tests	232	Suggested Further Readings	242

### 17. BULK METHOD 243-253

17.1. Introduction	243	17.9. Single-Seed-Descent Method	249
17.2. Applications	243	17.10. Merits of Bulk Method	251
17.3. Procedure of Bulk Method	244	17.11. Demerits of Bulk Method	251
17.4. Artificial Selection During the Bulking Period	245	17.12. Achievements	251
17.5. Duration of Bulking	246	17.13. Comparison Between Bulk and Pedigree Methods	252
17.6. Natural Selection During Bulking	246	Questions	253
17.7. Modification of the Bulk Method	248	Suggested Further Readings	253
17.8. Selected-Bulk Method	248		

### 18. BACKCROSS METHOD 254-266

18.1. Introduction	254	18.3. Applications of Backcross Method	252
18.2. Requirements for a Backcross Programme	254	18.4. Genetic Consequences of Repeated Backcrossing	256

18.5. Selection of Parents	257	18.10. Merits of Backcross Method	264
18.6. Procedure of Backcross Method	257	18.11. Demerits of Backcross Method	264
18.7. Transfer of Two or More Characters into a Single Recurrent Parent	262	18.12. Achievements	264
18.8. Modifications of the Backcross Method	263	18.13. Comparison Between Backcross and Pedigree Methods	265
18.9. Backcross Method in Cross-Pollinated Crops	264	<b>Questions</b>	266
		<b>Suggested Further Readings</b>	266

## 19. OTHER APPROACHES TO BREEDING OF SELF-POLLINATED CROPS 267-280

19.1. Introduction	267	19.5. Hybrid Varieties	276
19.2. Multiline Varieties	267	<b>Questions</b>	280
19.3. Population Breeding Approach	270	<b>Suggested Further Readings</b>	280
19.4. Rapid Isolation of Homozygous Lines	274		

## 20. EFFECTIVENESS OF DIFFERENT METHODS FOR HANDLING OF SEGREGATING GENERATIONS 281-299

20.1. Introduction	281	20.6. Bulk Method	290
20.2. Pedigree Selection (PS)	281	20.7. Bulk vs. PS and SSD	294
20.3. Single-seed Descent	282	20.8. A Dynamic Breeding Scheme	296
20.4. Pedigree Selection vs. SSD	286	<b>Questions</b>	297
20.5. Double Haploid Technique	287	<b>Suggested Further Readings</b>	297

## PART V : METHODS : CROSS-POLLINATED CROPS

### 21. POPULATION IMPROVEMENT 301-324

21.1. Introduction	301	21.8. Effectiveness of Progeny Selection Schemes	316
21.2. Methods of Population Improvement	301	21.9. Comparative Effectiveness of Different Selection Schemes	320
21.3. Objectives of Selection	303	21.10. General Conclusions from Selection Experiments in Maize	321
21.4. Mass Selection	303	<b>Questions</b>	323
21.5. Selection Schemes with Progeny Test	306	<b>Suggested Further Readings</b>	324
21.6. Applications of Mass and Progeny Selections	308		
21.7. Recurrent Selection	309		

### 22. HYBRID VARIETIES 325-357

22.1. Introduction	325	22.8. Diversification/Improvement of CMS Lines	340
22.2. Definitions	325	22.9. Genetic Diversity and Heterosis	346
22.3. Hybrid Varieties	326	22.10. Merits of Hybrid Varieties	347
22.4. Development of Inbreds	328	22.11. Demerits of Hybrid Varieties	347
22.5. Evaluation of Inbreds	331	22.12. Achievements through Hybrid Varieties	348
22.6. Production of Hybrid Seed	334	22.13. Synthetic Varieties	350
22.7. Improving the Characteristics of Inbred Lines	337		

22.14. Definitions	350	22.19. Maintenance of Synthetic Varieties	354
22.15. Operations in Production of Synthetic Varieties	351	22.20. Test for Combining Ability in Species Where Pollination Control is Difficult	355
22.16. Merits of Synthetic Varieties	352	22.21. Achievements through Synthetic/ Composite Varieties	356
22.17. Demerits of Synthetic Varieties	352	<b>Questions</b>	356
22.18. Factors Determining The Performance of Synthetic Varieties	353	<b>Suggested Further Readings</b>	357

## PART VI : METHODS : CLONAL CROPS

### 23. CLONAL SELECTION AND HYBRIDIZATION 359-370

23.1. Introduction	359	23.8. Clonal Selection	362
23.2. Characteristics of Asexually Propagated Crops	359	23.9. Hybridization	364
23.3. Clone	360	23.10. Interspecific Hybridization	366
23.4. Origin of Genetic Variation Within Clones	360	23.11. Mutation Breeding	366
23.5. Comparison among Clones, Purelines and Inbreds	361	23.12. Problems in Breeding of Asexually Propagated Crops	368
23.6. Clonal Degeneration	362	23.13. Achievements	369
23.7. Methods of Improvement of Clonal Crops	362	<b>Questions</b>	369
		<b>Suggested Further Readings</b>	370

## PART VII : METHODS : STRESS RESISTANCE

### 24. BREEDING FOR RESISTANCE TO ABIOTIC STRESSES 371-399

#### I. DROUGHT RESISTANCE

24.1. Introduction	371	24.11. Relationship Between Drought Resistance Traits and Yield	385
24.2. Importance of Abiotic Stresses	371	24.12. Selection Criteria	386
24.3. Characteristics of Abiotic Stresses	372	24.13. Creation of Drought Environment	388
24.4. Minimising Losses due to Abiotic Stresses	373	24.14. Breeding Methods and Approaches	389
24.5. Breeding for Drought Resistance	375	24.15. Difficulties in Breeding for Drought Resistance	396
24.6. Effects of Drought on Plant Growth and Development	375	24.16. Drought Hardening	397
24.7. Types of Drought Environment	377	24.17. Achievements	397
24.8. Drought Resistance	377	<b>Questions</b>	398
24.9. Genetic of Drought Resistance	382	<b>Suggested Further Readings</b>	398
24.10. Sources of Drought Resistance	382		

### 25. BREEDING FOR RESISTANCE TO ABIOTIC STRESSES 400-422

#### II. MINERAL STRESSES (SALINITY, MINERAL DEFICIENCY AND MINERAL TOXICITY)

25.1. Introduction	400	25.5. Salinity Resistance	404
25.2. Salt-Affected Soils	400	25.6. Genetics of Salinity Resistance	406
25.3. Management of Salt-Affected Soils	401	25.7. Measurement of Salinity Resistance	407
25.4. Effects of Salinity Stress	403	25.8. Sources of Salinity Resistance	410

25.9. Breeding Approaches for Salinity Resistance	410	25.17. Creation of Mineral Deficiency Environment	417
25.10. Problems in Breeding for Salinity Resistance	412	25.18. Mineral Toxicity Resistance	417
25.11. Mineral Stress Resistance	412	25.19. Mechanisms of Toxicity and Resistance	417
25.12. Resistance to Mineral Deficiency Stress	413	25.20. Genetics of Mineral Toxicity Resistance	419
25.13. Mechanisms of Mineral Deficiency Resistance	413	25.21. Sources of Mineral Toxicity Resistance	419
25.14. Genetics of Mineral Deficiency Resistance	414	25.22. Creation of Mineral Toxicity Environment	419
25.15. Sources of Mineral Deficiency Resistance	415	25.23. Selection Criteria	420
25.16. Selection Criteria	415	25.24. Problems in Breeding for Mineral Deficiency/Toxicity Resistance	421
		<b>Questions</b>	421
		<b>Suggested Further Readings</b>	422

## 26. BREEDING FOR RESISTANCE TO ABIOTIC STRESSES 423-443

### III. HEAT AND COLD RESISTANCE

26.1. Introduction	423	26.14. Selection Criteria	435
26.2. Heat Stress	423	26.15. Freezing Stress	436
26.3. Heat Stress Resistance	425	26.16. Freezing Resistance	438
26.4. Genetics of Heat Tolerance	427	26.17. Genetics of Freezing Resistance	439
26.5. Sources of Heat Tolerance	428	26.18. Genetic Resources for Freezing Tolerance	440
26.6. Selection Environment	428	26.19. Selection Environment	441
26.7. Selection Criteria for Heat Resistance	429	26.20. Selection Criteria	441
26.8. Cold Resistance	430	26.21. Problems in Breeding for Freezing Tolerance	442
26.9. Chilling Stress	430	<b>Questions</b>	442
26.10. Chilling Tolerance	431	<b>Suggested Further Readings</b>	443
26.11. Genetics of Chilling Tolerance	433		
26.12. Sources of Chilling Tolerance	434		
26.13. Selection Environment	434		

## 27. BREEDING FOR RESISTANCE TO BIOTIC STRESSES 444-485

### I. DISEASE RESISTANCE

27.1. Introduction	444	27.12. Mechanism of Disease Resistance	455
27.2. Losses Due to Diseases	444	27.13. Genetics of Disease Resistance	456
27.3. History of Breeding for Disease Resistance	445	27.14. Oligogenic Inheritance	456
27.4. Generation of Variability in Pathogens	446	27.15. Polygenic Inheritance	463
27.5. Physiological Races and Pathotypes	448	27.16. Cytoplasmic Inheritance	466
27.6. Genetics of Pathogenicity	448	27.17. Molecular Basis for R Gene-Mediated Resistance	466
27.7. Disease Development	450	27.18. Nematode Resistance	468
27.8. Disease Escape	451	27.19. Resistance to Bacterial Pathogens	469
27.9. Disease Resistance	452	27.20. Virus Resistance	469
27.10. Disease Resistance	452	27.21. Resistance Genes for Multiple Pathogens and/or Insect Pests	470
27.11. Vertical and Horizontal Resistance	453		

27.22. Systemic Acquired Resistance	470	27.28. Yield Penalty due to Disease Resistance	481
27.23. Sources of Disease Resistance	471	27.29. Problems in Breeding for Disease Resistance	482
27.24. Methods of Breeding for Disease Resistance	473	27.30. Advantages of Breeding for Disease Resistance	482
27.25. Testing for Disease Resistance	477	<b>Questions</b>	483
27.26. Disease Epidemics	478	<b>Suggested Further Readings</b>	484
27.27. Oligogenic Versus Polygenic Resistance	480		

## 28. BREEDING FOR RESISTANCE TO BIOTIC STRESSES 486-511

### II. INSECT RESISTANCE

28.1. Introduction	486	28.14. Durability of Insect Resistance	504
28.2. Historical	487	28.15. Prevention of Insect Outbreaks	505
28.3. Losses Due to Insects	487	28.16. Breeding for Enhanced Biological Control	506
28.4. Genetics Variability in Insect Pests	488	28.17. Advantages of insect Resistance	507
28.5. Genetics of Virulence	489	28.18. Problems in Breeding for Insect Resistance	507
28.6. Degree of Resistance	489	28.19. Achievements	508
28.7. Mechanism of Insect Resistance	489	28.20. Toxicity Aspects of Resistance Breeding	509
28.8. Insect Population Growth Models	493	28.21. Breeding for Resistance to Parasitic Weeds	509
28.9. Nature of Insect Resistance	494	28.22. Bioenergetic Cost of Resistance Breeding	510
28.10. Genetics of Insect Resistance	496	<b>Questions</b>	510
28.11. Sources of Insect Resistance	500	<b>Suggested Further Readings</b>	511
28.12. Breeding Methods for Insect Resistance	501		
28.13. Screening Techniques	502		

## PART VIII : METHODS : SPECIAL APPROACHES

### 29. IDEOTYPE CONCEPT IN CROP IMPROVEMENT 513-530

29.1. Introduction	513	29.7. Choice of Traits for Ideotypes	520
29.2. Historical	513	29.8. Characteristics of a Crop Ideotype	520
29.3. Ideotype Concept	514	29.9. Ideotypes of Selected Crops	521
29.4. Development of Ideotype	515	29.10. Ideotype Breeding	526
29.5. Identification of Traits for Analysis	516	<b>Questions</b>	530
29.6. Determination of the Value of a Trait	517	<b>Suggested Further Readings</b>	530

### 30. BREEDING FOR QUALITY I. PROTEIN QUALITY 531-562

30.1. Introduction	531	30.13. Sources for Quality Traits	552
30.2. Quality Traits	531	30.14. Breeding Approaches	553
30.3. Quality Traits of Selected Crops	534	30.15. Genetic Engineering	554
30.4. Breeding For Nutritional Quality	542	30.16. Important Considerations in Breeding for Improved Quality	557
30.5. Enhanced Vitamin Content	542	30.17. Analytical Methods	558
30.6. Elimination of Toxic Substances	543	30.18. Objectives and Priorities	559
30.7. Protein Content and Quality	544	30.19. Selection Criteria for Protein Content	560
30.8. Protein Content	545	30.20. Achievements	560
30.9. Protein Quality	546	30.21. Limitations of Breeding for Quality	561
30.10. Cereal Protein Quality	547	<b>Questions</b>	562
30.11. Legume Protein Improvement	550	<b>Suggested Further Readings</b>	562
30.12. Genetic Control of Nutritional Traits	550		

**31. BREEDING FOR QUALITY I. OIL QUALITY****563-583**

31.1. Introduction	563	31.7. Bioenergetic Considerations	578
31.2. Oils and Fats	564	31.8. Breeding Approaches	579
31.3. Fatty Acids	565	31.9. Biotechnological Approaches	580
31.4. Oilseed Crops	569	31.10. Achievements	582
31.5. Oil Yield	569	<b>Questions</b>	582
31.6. Oil Quality	571	<b>Suggested Further Readings</b>	583

**32. MUTATIONS IN CROP IMPROVEMENT****584-612**

32.1. Introduction	584	32.14. Mutation Breeding for Polygenic Traits	599
32.2. Historical Account	584	32.15. Precautions	600
32.3. Spontaneous and Induced Mutations	585	32.16. Presoaking	601
32.4. Effects of Mutation on Survival	585	32.17. Recurrent Irradiation	601
32.5. Molecular Basis of Gene Mutation	586	32.18. Gamma-Garden	601
32.6. Mutagens	587	32.19. Directed Mutagenesis	602
32.7. Radiation Dose	590	32.20. Effectiveness and efficiency of Mutagenesis	602
32.8. Effects of Ionizing Radiations on Biological Targets	590	32.21. Utilization of Induced Mutations	603
32.9. Factors Influencing Radiation Effects	591	32.22. Applications of Mutation Breeding	604
32.10. Mechanism of Action of Radiation	592	32.23. Limitations of Mutation Breeding	605
32.11. Mechanism of Action of Chemical Mutagens	593	32.24. Achievements	606
32.12. Procedure for Mutation Breeding	594	<b>Questions</b>	611
32.13. Mutation Breeding for Oligogenic Traits	597	<b>Suggested Further Readings</b>	611

**33. POLYPLOIDY IN PLANT BREEDING****613-638**

33.1. Introduction	613	33.6. Monoploids and Haploids	621
33.2. Types of Changes in Chromosome Number	613	33.7. Autopolyploidy	621
33.3. History of Heteroploidy	615	33.8. Allopolyploidy	628
33.4. Aneuploidy	615	<b>Questions</b>	638
33.5. Aneuploid Analysis for Locating Genes on Particular Chromosomes	617	<b>Suggested Further Readings</b>	638

**34. DISTANT HYBRIDIZATION IN PLANT BREEDING****639-659**

34.1. Introduction	639	34.7. Consequences of Segregation in Distant Hybrids	650
34.2. History of Distant Hybridization	639	34.8. Applications of Distant Hybridization in Crop Improvement	651
34.3. Barriers to Production of Distant Hybrids	640	34.9. Limitations of Distant Hybridization	657
34.4. Techniques for Production of Distant Hybrids	642	34.10. Achievements	658
34.5. Unreduced Gametes in Distant Hybridization	643	<b>Questions</b>	659
34.6. Sterility in Distant Hybrids	649	<b>Suggested Further Readings</b>	659

**35. BIOTECHNOLOGY IN CROP IMPROVEMENT****660-684****I. TISSUE CULTURE TECHNOLOGY**

35.1. Introduction	660	35.8. Embryo Culture	668
35.2. Biotechnology in India	661	35.9. Meristem Culture	669
35.3. Scope and Importance	661	35.10. Anther or Pollen Culture	671
35.4. Plant Biotechnology	663	35.11. Tissue and Cell Cultures	674
35.5. Plant Tissue Culture	664	35.12. Somatic Hybridization	679
35.6. History of Plant Tissue Culture	664	35.13. Achievements and Future Prospects	682
35.7. The Technique of Plant Tissue Culture	664	<b>Questions</b>	684

**36. BIOTECHNOLOGY IN CROP IMPROVEMENT****685-716****II. TRANSGENIC TECHNOLOGY**

36.1. Introduction	685	36.11. Applications of Genetic Engineering	700
36.2. Recombinant DNA Technology	685	36.12. Micro-RNA Manipulation	707
36.3. Gene Transfer in Plants	688	36.13. Biosafety Concerns and Regulation of Transgenic Plants	707
36.4. Gene Constructs	688	36.14. Achievements	708
36.5. Vectors for Plants	694	36.15. Integration with Plant Breeding	711
36.6. Methods of Gene Transfer	696	36.16. Comparison between Classical Plant Breeding and Genetic Engineering	714
36.7. Integration and Inheritance of Transgenes	698	<b>Questions</b>	715
36.8. Characterization of Transgenic Plants	698	<b>Suggested Further Readings</b>	715
36.9. Expression of Transferred Genes	699		
36.10. Transgenic, Intragenic and <i>Cis</i> -Genic Plants	700		

**37. MOLECULAR MARKERS IN PLANT BREEDING****717-744****I. MARKERS AND MARKER-TRAIT ASSOCIATIONS**

37.1. Introduction	717	37.9. Mapping of Oligogenic Traits	734
37.2. An Ideal Marker System	718	37.10. Mapping of Quantitative Trait Loci (QTLs)	735
37.3. Molecular Marker Systems	718	37.11. Developing Markers for Marker-Assisted Selection	742
37.4. Categories of Molecular Markers	725	37.12. Confirmation and Validation of Marker-Trait Associations	743
37.5. Marker System Selection	725	<b>Questions</b>	744
37.6. Detection of Marker-Trait Associations	726		
37.7. Mapping Populations	727		
37.8. Construction of Molecular Marker Maps	732		

**38. MOLECULAR MARKERS IN PLANT BREEDING****745-759****II. APPLICATIONS OF MOLECULAR MARKERS**

38.1. Introduction	745	38.5. Selection of Parents for Crosses	747
38.2. Genetic Diversity Analysis	745	38.6. Positional Cloning	748
38.3. Germplasm Characterisation and Conservation	746	38.7. Marker-Assisted Selection (MAS)	748
38.4. Identification of Varieties and Hybrids	746	38.8. Marker-Assisted Back-Crossing	749
		38.9. Gene Pyramiding	750

38.10. Bacterial Leaf Blight Resistant Version of Pusa Basmati 1	752	38.15. Advantages of Molecular Markers	755
38.11. QTL Introgression	754	38.16. Limitations of Molecular Markers	756
38.12. Marker-Assisted Recurrent Selection	754	38.17. Achievements	756
38.13. Genomic Selection	755	38.18. Future Prospects	757
38.14. Novel Breeding Schemes	755	<b>Questions</b>	758
		<b>Suggested Further Readings</b>	758

## PART IX : EVALUATION AND MULTIPLICATION

### 39. RELEASE OF NEW VARIETIES 761-772

39.1. Introduction	761	Subcommittee on Crop Standards and Release of Varieties	769
39.2. Evaluation	761	39.5. Release of a Variety by a State Variety Release Committee	770
39.3. Identification of Entries for Prerelease Multiplication	768	39.6. Multiplication	771
39.4. Release of a Variety by the Central		<b>Questions</b>	772

### 40. QUALITY SEED 773-807

40.1. Introduction	773	40.9. Quality Seed Production	784
40.2. Historical	774	40.10. Seed Processing	787
40.3. Development of Seed Industry in India	774	40.11. Seed Certification	791
40.4. The Indian Seeds Act (1966)	776	40.12. Maintenance of Improved Seed	800
40.5. Classes of Improved Seed	777	40.13. Seed Production Organisations	800
40.6. Requirements for Seed Certification	779	40.14. Certified Seed Production of Selected Crops	802
40.7. Requirements for Foundation Seed	782	<b>Questions</b>	806
40.8. Operations Essential for a Successful Seed Industry	782	<b>Suggested Further Readings</b>	806

## PART X : MISCELLANEOUS CONSIDERATIONS

### 41. ORGANISATIONS FOR CROP IMPROVEMENT IN INDIA 809-830

41.1. Introduction	809	41.6. Agriculture Universities	827
41.2. History of Agricultural Research in India	809	41.7. All India Coordinated Research Projects on Crops	828
41.3. Organisations for Crop Improvement	818	41.8. Network and Other Research Projects	829
41.4. Indian Council of Agricultural Research (ICAR)	818	<b>Questions</b>	829
41.5. Central Institutes for Crop Improvement	823	<b>Suggested Further Readings</b>	830

### 42. INTERNATIONAL INSTITUTES FOR CROP IMPROVEMENT 831-837

42.1. Introduction	831	42.4. Some Contributions of the International Institutes	836
42.2. The International Institutes	831	<b>Questions</b>	837
42.3. Functions of International Institutes	835	<b>Suggested Further Readings</b>	837

## 43. INTELLECTUAL PROPERTY RIGHTS

838-860

43.1. Introduction	838	43.8. Choice of IPR Protection	855
43.2. History of Intellectual Property Rights in India	838	43.9. Management of IPR	856
43.3. Intellectual Property	839	43.10. Benefits from IPR	856
43.4. Protection of Intellectual Property Rights	839	43.11. Problems from IPR	856
43.5. International Harmonization of Patent Laws	842	43.12. Geographical Indications	857
43.6. Protection of Biotechnological Inventions	843	43.13. International Convention on Biological Diversity (ICBD)	857
43.7. Plant Breeder's Rights (PBR)	849	43.14. Indian Response to the IPR Regime	858
		<b>Questions</b>	859
		<b>Suggested Further Readings</b>	859

## GLOSSARY

861-884

## AUTHOR INDEX

885-889

## SUBJECT INDEX

891-907
